Monday 10 December, Katowice, Poland

Transport Day 2018: Transport community responds to Paris Agreement call to action and puts decarbonised mobility at heart of tackling climate change

Transport is responsible for a quarter of all energy-related greenhouse gas emissions. At least half of all air pollution in cities and a third of transport-related CO₂ emissions originate from urban passenger transport.

The global transport community recognises the urgent need to address these challenges, and on Thursday 6 December convened the 7th annual **Transport Day** to showcase existing solutions and future ambitions, particularly around urban transport and new initiatives of national and sub-national governments to decarbonise mobility.

Organised by the **European Commission's CIVITAS Initiative** and the **Partnership on Sustainable, Low Carbon Transport (SLoCaT)** on behalf of the **Paris Process on Mobility and Climate (PPMC)**, the 7th annual Transport Day was hosted by the **City of Katowice**.

Transport Day 2018 focused on urban mobility solutions, and recognised the urgent need to raise ambitions in all areas of transport. Over 200 people were welcomed by the **Mayor of Katowice, Marcin Krupa**, who introduced the city's activities for moving towards a more efficient and people-centered transport system.

Violeta Bulc, European Commissioner for Transport emphasised the importance of transport decarbonisation and climate action for our lives and livelihoods. Commissioner Bulc introduced the European Commission's "long-term vision for a prosperous, modern, competitive and climate neutral economy" by 2050.

José Mendes, First Secretary of State for Mobility, Portugal, discussed the importance of bringing together countries, cities and regions, and companies to achieve this goal. He is also **Chair of the Transport Decarbonisation Alliance (TDA)**.

José Mendes commented that: *"Demand for mobility will not decrease. Emissions will double if we do nothing. Transport is a problem today, but in the future it will be part of*

the solution. There are enough solutions to achieve carbon neutrality for transport; there is also political momentum, and national leaders are starting to recognise the importance of non-state actors. This is why we created the TDA, a coalition of the willing.”

This year’s Transport Day demonstrated the strong role cities have to play in reducing greenhouse gas emissions and improving air quality by implementing measures in the transport sector. It showcased best practice examples from around the globe, with presentations from various European cities involved in the European Commission-funded CIVITAS Initiative.

Breakout sessions highlighted the importance of city- and sub-national-level actions; adaptation strategies and social, policy, and financing innovations that can galvanise them; and the importance of these innovations to support mitigatory action, such as the expansion of electromobility and walking and cycling. Another common sentiment was that the technology and solutions needed already exist, and must be used together in a comprehensive, integrated, and cross-sectoral approach.

The Transport Day 2018 concluded with a closing plenary moderated by **Maruxa Cardama, Secretary-General of SLoCaT**, with **Andrea Meza, Director of the Climate Change Directorate, Ministry of Environment and Energy of Costa Rica**, **Dominic Patella, Senior Transport Specialist, World Bank**, and **Armin Wagner, Team Leader for Sustainable Mobility, GIZ**.

They pointed to the urgent need for transport to boldly and directly engage with adaptive and mitigatory efforts, and the need for the transport community to be embedded in the climate discussions of the UNFCCC, particularly in concert with the energy sector.

In addition to being essential for meeting emissions goals, urban mobility action offers substantial benefits by improving air quality, congestion, quality of life, traffic safety, public health and social cohesion.

The day of intense discussion and exchange emphasised to all present how national governments can support cities through framing activities for successful sustainable urban mobility action. These include national legislation to foster sustainable urban

mobility, common planning tools, and funding for cities to implement necessary initiatives.

Ultimately, Transport Day 2018 should lead to the increased integration of urban mobility-related actions into the Nationally Determined Contributions ([NDCs](#)) being developed by States in 2019 and submitted to the UNFCCC in 2020.

Currently, only 8% of NDCs have quantified emissions reduction targets relating to transport. This must change now if transport's immense potential to help tackle climate change is to be realised - that process started at Transport Day 2018.

Notes for Editors

About Transport Day

Transport Day, first launched at COP18 in Doha, is a yearly gathering of the transport community alongside the COP, which aims to raise the profile and awareness of transport and mobility-related issues in the context of climate change. See more on Transport Day 2018 [here](#).

PARIS PROCESS
ON MOBILITY AND CLIMATE

About the Partnership on Sustainable, Low Carbon Transport (SLoCaT)

The Partnership on Sustainable, Low Carbon Transport is a multi-stakeholder partnership of over 90 members (representing transport sector organisations, UN entities, multilateral and bilateral development organisations, NGOs, philanthropy, academia, and the private sector). SLoCaT promotes the integration of all modes of sustainable, low-carbon transport in global climate and sustainability policy frameworks. It also enables action towards the implementation of sustainable, low-carbon transport with a focus on developing countries in Asia, Latin America and Africa. [Read more](#) on SLoCaT.

About the Paris Process on Mobility and Climate

The Paris Process on Mobility and Climate is a joint coalition of SLoCaT and Movin' on (formerly Michelin Challenge Bibendum (MCB), which was created in 2015 to strengthen the voice of the sustainable transport community in the UNFCCC process. Find out more on [PPMC](#) and [MCB](#).

About the CIVITAS Initiative

CIVITAS is a network of over 320 cities committed to cleaner, better transport in Europe and beyond. Having started in 2002, CIVITAS currently supports three Living Lab projects where a range of sustainable mobility solutions are being implemented and 13 research projects under the European Commission's Horizon 2020 funding programme. For over 15 years, it has been testing integrated packages of policies and measures to address transport, energy and environmental objectives. [Read more on CIVITAS](#).

About the Transport Decarbonisation Alliance

The Transport Decarbonisation Alliance (TDA) was launched in 2018 as a unique collaboration to accelerate the worldwide transformation of the transport sector towards a net-zero emission mobility system before 2050. The TDA includes countries (Costa Rica, Finland, France, Luxembourg, the Netherlands and Portugal), local governments (Rotterdam, Porto, Lisbon, Matosinhos, and Vila Nova de Gaia and the state of California), and companies (Alstom, Brisa, Ceia, Deutsche Post DHL Group, EDP, Itaipu Binacional, Michelin and PTV Group). Find a full list of Transport Decarbonisation Alliance members and more details [here](#).

PARIS PROCESS
ON MOBILITY AND CLIMATE

Representatives of the Transport Decarbonisation Alliance (from L to R):

Sylvie Banoun, Ministry for Environment, Energy and the Sea, France; Mario Fruianu, Project Manager Green Transport, Ministry for Infrastructure and Water Management; Patrick Oliva, PPMC Co-founder; Marcin Krupa, Mayor, City of Katowice; José Mendes, First Secretary for Mobility of Portugal; Violeta Bulc, European Commissioner for Transport; Nicolas Beaumont, Sustainable Development and Mobility, Michelin; Barry Howe, Director – Sustainable Mobility + Community Investment, Alstom.
