1. BENEFITS OF SUSTAINABLE, LOW CARBON TRANSPORT

- Avoid and reduce the need for motorised travel
- Shift to more environmentally friendly modes
- Improve energy efficiency of transport modes

2. DRIVERS OF TRANSPORT DEMAND

- Demand for mobility of passengers and goods is influenced by several external factors, including:
  - Economic growth
  - Population growth
  - Changes in household characteristics
  - Technological changes

3. TRANSPORT MITIGATION POTENTIAL

- More than 75% below current levels
- Transport CO2 emissions per capita are in required range of 0.2 tonnes

4. TRANSPORT EMISSIONS

- Transport CO2 emissions per capita:
  - North America: 10.4 tonnes
  - Latin America: 8.3 tonnes
  - Africa: 6.3 tonnes

5. NATIONALLY DETERMINED CONTRIBUTIONS (NDCs)

- Mitigation measures in NDCs focus on:
  - Energy efficiency improvements
  - Vehicle fuel economy improvements
  - Public transport expansion

6. IMPLEMENTATION OF LOW CARBON TRANSPORT POLICIES

- New Mobility Services
- Urban Public Transport
- Railways
- Bicycles

7. MORE INFORMATION

- The Avoid-Shift-Improve framework is a comprehensive approach to implement sustainable, low-carbon transport.
